Professional Summary

Data Science and AI/ML professional with experience in Data Analytics, Machine Learning, Deep Learning, and Computer Vision. Skilled in Python, SQL, TensorFlow, PyTorch, YOLOv8, FastAPI, Power BI, and ETL processes. Experienced in data preprocessing, feature engineering, predictive modeling, neural networks, model optimization, and deployment through projects involving credit risk prediction, pricing compliance analytics, and computer vision-based hazardous waste detection. Passionate about applying artificial intelligence and data science techniques to deliver scalable, data-driven business solutions.

WORK EXPERIENCE - 6YRS

Manager - Client Services HDFC Asset Management Company **June 2019 - Oct 2025**

- Performed end-to-end KYC onboarding for retail and corporate investors, ensuring compliance with regulatory and organizational guidelines.
- Processed financial and non-financial transactions while identifying, verifying, and escalating suspicious activities in accordance with compliance requirements.
- Validated and processed KYC documentation including identity proof, address proof, and beneficial ownership details for investor accounts.
- Coordinated with Registrar and Transfer Agents (RTA) and internal stakeholders to ensure seamless, accurate, and compliant transaction processing.
- Managed investor and distributor queries across multiple locations, improving service responsiveness and operational efficiency.

PROJECTS

Pricing Compliance System

Intern - PROITBRIDGE Pvt Ltd (Unpaid) **March 2026**

- Developed an automated Pricing Compliance ETL system using Python, SQL, pandas, and NumPy to identify MAP (Minimum Advertised Price) and LPP policy violations across e-commerce marketplaces.
- Built web scraping pipelines to extract seller information, SKU details, advertised prices, marketplace data, and live product links for real-time price monitoring and compliance tracking.
- Designed and implemented ETL workflows for data extraction, transformation, cleansing, and validation to improve data accuracy and reporting efficiency.
- Integrated SQL databases to store pricing, seller, and violation records, enabling efficient querying, reporting, and historical analysis.
- Automated compliance report and warning letter generation using python-docx, reducing manual effort by approximately 80% and improving operational productivity.

Machine Learning-Driven Credit Risk and Bad Debt Prediction Model

Intern - PROITBRIDGE Pvt Ltd (Unpaid) **May 2026**

- Built a machine learning-based bad debt prediction model to identify high-risk customers before loan approval.
- Optimized feature selection to identify key drivers of customer delinquency and loan default.
- Evaluated the impact of external factors such as market trends and economic conditions to enhance model stability and reliability.
- Conducted technology assessment and model research to recommend the most effective approach for building a scalable and dynamic risk prediction solution.
- Researched and evaluated suitable technologies, algorithms, and modeling approaches for an efficient and scalable deployment framework.

Computer Vision-Based Hazardous Waste Detection using Deep Learning
Intern - PROITBRIDGE Pvt Ltd (Unpaid) **June 2026**

- Developed a Computer Vision solution for hazardous waste detection using YOLOv8 and Python
- Performed data preprocessing, image annotation validation, and dataset preparation to improve model performance.
- Trained and optimized deep learning models using Neural Networks for accurate object detection.
- Applied model optimization techniques to enhance inference speed and detection accuracy.

EDUCATION

M.B.A. SSN School of Management, Chennai, Tamil Nadu (2017–2019)

B.E. E.E.E., Panimalar Institute of Technology, Chennai, Tamil Nadu (2013–2017)

SKILLS

- Python
- SQL
- OOPS Concepts
- PowerBI
- Machine Learning
- Deep Learning
- Natural Language Processing
- Statistics
- Data Visualization
- Data Analysis

TECHNICAL SKILLS

Languages: Python, SQL
Technologies/Frameworks: Pandas, NumPy, Seaborn, Matplotlib, Scikit-learn, Keras, TensorFlow
Computer Vision & Deployment: YOLOv8, OpenCV, FastAPI, Model Deployment
Data Engineering: ETL, Data Preprocessing, Feature Engineering, Data Cleaning
Developer Tools: VS Code, Google Colab, Jupyter notebook

ACHIEVEMENTS

- Identified and escalated incorrect rejection cases to management, improving service quality and stakeholder satisfaction.
- Trained walk-in investors to use digital platforms for transactions and account updates, increasing digital adoption and improving front-end operational efficiency.

DECLARATION

- This resume truthfully reflects my qualifications and experience.
