V V V SATYA NAVEEN

Command Center Analyst | IT Operations Analyst | IT Infrastructure & Incident Management
Hyderabad, India | Mobile: 9515439125 | Email: naveenv9515@gmail.com | LinkedIn: naveenvarupula

PROFESSIONAL SUMMARY

Results-oriented IT Infrastructure Operations professional with 3 years 7 months of experience in Command Center Operations, Infrastructure Monitoring, and Incident Management within a 24×7 production support environment at Tata Consultancy Services (TCS). Hands-on expertise in monitoring enterprise Windows servers using DXIM, managing P3/P4 incidents end-to-end in ServiceNow ITSM, maintaining Response and Resolution SLA compliance, performing server health verification via Remote Desktop (RDP), analysing disk utilization using Tree Size, and coordinating with Windows and Linux resolver teams. Recognized twice as Best Team Member and awarded TCS Gems for outstanding performance. Experience with strong understanding of incident lifecycle, SLA governance, stakeholder communication, and operational reporting.

CORE COMPETENCIES

▪ Command Center Operations	▪ IT Service Management	▪ Infrastructure Monitoring
▪ Incident Management (P3/P4)	▪ ServiceNow ITSM	▪ ITIL Incident Lifecycle
▪ DXIM Alert Monitoring	▪ Windows Server Monitoring	▪ Remote Desktop (RDP)
▪ CPU / Memory Monitoring	▪ Disk Utilization (Tree Size)	▪ Alert Suppression
▪ Response & Resolution SLA	▪ Escalation & Ticket Routing	▪ CTASK & Backlog Reporting
▪ Maintenance Window Management	▪ Stakeholder Communication	▪ 24×7 Production Support

PROFESSIONAL EXPERIENCE

Tata Consultancy Services (TCS) — *Hyderabad, India*
Command Center Analyst / Infrastructure Operations Analyst — *Feb 2022 – Sep 2025*
Project: APTIV | Domain: Manufacturing | Environment: 24×7 Production Support

Infrastructure Monitoring & Server Health

- Monitored enterprise infrastructure 24×7 using DXIM monitoring tool to ensure high availability and performance of critical production systems.
- Tracked CPU utilization, memory utilization, and disk utilization metrics across Windows server environments, responding to threshold breaches proactively.
- Performed initial server health verification by accessing Windows servers through Remote Desktop (RDP) to assess alert severity and gather diagnostic information.
- Suppressed monitoring alerts during approved maintenance windows to prevent false-positive incident generation and reduce unnecessary alert noise.

Incident Management & Escalation

- Managed end-to-end lifecycle of P3 and P4 incidents in ServiceNow ITSM including creation, categorization, prioritization, assignment, investigation, escalation, and closure in line with ITIL best practices.
- Resolved CPU and memory utilization incidents independently upon metric normalization; escalated unresolved incidents to Windows or Linux L2 resolver groups with complete investigation notes and RCA context.
- Analysed disk utilization alerts by logging into servers and running Tree size reports to identify top storage consumers; notified Operations Managers and respective teams via structured emails for cleanup action.
- Applied 3-Strike escalation protocol for non-responsive disk space incidents issued up to 3 reminder notifications and closed tickets with documented justification upon continued non-response.

- Updated ServiceNow work notes, investigation findings, assignment details, and resolution information throughout the ticket lifecycle to maintain complete audit trails.

SLA Compliance & Operational Reporting

- Maintained Response SLA and Resolution SLA compliance through timely ticket acknowledgement, follow-up, escalation, and closure, consistently achieving high SLA adherence targets.
- Prepared and distributed CTASK reports and backlog incident reports to internal resolver teams and stakeholders for operational visibility and timely ticket actioning.
- Participated in daily shift handovers ensuring seamless continuity of 24×7 support operations and complete knowledge transfer across shifts.
- Coordinated with cross-functional Windows, Linux, and infrastructure teams to restore services within agreed service levels, minimizing MTTR.
- Followed Standard Operating Procedures (SOPs) and ITIL incident management practices throughout all production support activities.

Avineon India Pvt Ltd *Hyderabad, India*

GIS Associate *Dec 2020 – Jan 2022*

Project: HERE Maps | Domain: Geospatial / Digital Mapping

- Analyzed and processed spatial data for HERE Maps, ensuring high-accuracy digital mapping by updating road networks, landmarks, and points of interest using internal HERE GIS tools and satellite imagery.
- Collaborated with team members to meet daily production targets and data quality benchmarks within defined project timelines.

TOOLS & TECHNOLOGIES

ITSM Platform	ServiceNow (Incident Management, CTASK Tracking, SLA Monitoring, Work Notes)
Monitoring Tool	DXIM (Alert Monitoring, Threshold Management, Alert Suppression)
Server Access	Remote Desktop Protocol (RDP) — Windows Server health verification
Disk Analysis	Tree Size — Disk utilization analysis, storage consumer identification
Reporting	CTASK Reports, Backlog Reports, SLA Compliance Tracking
Productivity	Microsoft Outlook (Stakeholder Communication), Microsoft Excel (Reporting)

KEY ACHIEVEMENTS

- Best Team Member Award — Received twice at TCS for outstanding performance and operational contribution.
- Ensured zero false-positive alert noise during maintenance windows through disciplined alert suppression practices.
- Maintained high SLA compliance rate (Response & Resolution SLA) consistently across all shifts in the APTIV manufacturing domain.
- Managed end-to-end P3/P4 incident lifecycle with minimal MTTR, ensuring zero production impact on critical Windows server environments.

EDUCATION

Bachelor of Technology — Electrical & Electronics Engineering *Passed Out: 2020*

Ideal Institute of Technology | CGPA: 8.05

Diploma — Electrical & Electronics Engineering *Passed Out: 2017*

Aditya Engineering College | Percentage: 80.05%

SSC (10th Standard) *Passed Out: 2014*

Yeleswaram Public School | AP Board | GPA: 9.2
