WORK HISTORY

June 2024 - Current
Infosys - Senior Consultant, Chennai, India
Client: Microsoft; Product: OneVet
A centralized vetting platform ensures compliance and mitigates fraud risks with third-party entities. Technologies: .NET Core, C#, Semantic Kernel, Azure OpenAI, MCP, Azure Foundry, EF Core, SQL Server, Azure Cloud, Agile. Key Responsibilities: Led the team and managed project delivery. Enhanced platform with innovative features. Automated UI workflows using Playwright. Built agentic AI solutions with Semantic Kernel and Azure OpenAI. Maintained code quality and compliance standards. Collaborated with Microsoft stakeholders for requirements and timelines.

August 2021 - June 2024
Cognizant - Senior Associate, Chennai, India
Electrolux AB is a renowned Swedish multinational home appliance manufacturer that produces a range of household appliances, such as refrigerators, ovens, washing machines, and vacuum cleaners, among others. As a service provider for Electrolux, we are responsible for developing and maintaining various applications that are essential to their business operations. These applications include e-commerce and support websites that are designed to improve the user experience of their customers. The e-commerce website is a platform that allows customers to

purchase Electrolux products online. Our team works closely with Electrolux to ensure that the website is functional, secure, and user-friendly. We are responsible for developing new features, improving the website's performance, and ensuring that it is accessible to customers from all over the world. The support website, on the other hand, is designed to help customers troubleshoot issues with their Electrolux products. This website provides customers with a wealth of information, including manuals, FAQs, and troubleshooting guides. Our team works closely with Electrolux to ensure that this website is up-to-date, easy to navigate, and provides the information that customers need to resolve their issues.

June 2021 - August 2021
FIS Payment Solutions - Senior Technical Lead
Here, I am working as a senior technical lead.

September 2017 - June 2021
HCL Infosystems - Tech Lead
Panasonic: The process tracker, Tracking module, tracks and controls the manufacturing execution, including the status and history of products and resources on the production floor. It also enables a real-time view of production activity. We are developing this product for Panasonic. Tools and technologies include ASP.NET Core, ASP.NET MVC5, C#, Entity Framework 6.0, Web API, ASP.NET Identity, Unit Testing, and jQuery. Role: Tech Lead. Duration: SEP 2017 to present.
My Role:

- Based on the functional design, contributed to the software architecture and technical design in the areas of identifying the service components and the database structure(s).
- Architected the initial project structure and components.
- Implement the dependency injection.
- Architected the queue mechanism using a Windows service.
- Architected the SignalR for updating the UI in real time.
- Managing the ten-member team.
- Facilitate and coordinate the interaction between technical teams.

June 2016 - September 2017
DXC Technology (HPE) - Software Engineer, Chennai, India
ACF — Agile Card Framework, also known as card payment systems. Acquirer Portal: To support all aspects of merchant accounting, including adding new merchants, updating existing merchants, performing customer service inquiries, entering, rejecting, and conducting reject repair activities. Issuer Portal: Create and maintain consumer and commercial card accounts. Customer Service Portal — To manage and service prepaid card account information. Tools and technologies: ASP.NET, C#, Rebar Framework. Role: SVC II Developer. Duration: June 2016 to October 2017.

My role:

- Developed the adjustment search screen using the Rebar framework.
- Developed the Jasper report.
- Implemented the Jasper report into the UI.
- Prepared unit test cases and unit test plans.
- Facilitate and coordinate the interaction between technical teams

April 2013 - May 2016
Zanec Soft Tech - Senior Software Engineer
SMART Works Clinical Enterprise iForms@Home product allows patients to participate in the electronic forms workflow from anywhere using devices with which they are familiar, namely their own PCs, tablets, and smartphones.

Tools and technologies: ASP.NET MVC5, C#, Entity Framework 6.0, Web API, ASP.NET Identity, Unit Testing, and jQuery. Role: Senior Software Engineer and Software Architect. Duration: Dec 2014 to May 2015.
My Role:

- Architected the notification engine for sending email and SMS. For sending SMS, a third-party API provided by Twilio was leveraged.
- Architected the factory design pattern for the notification service.
- Architected a Windows service for scheduling.
- Architected the security for implementing the Strong Name tool (Sn.exe), which helps sign assemblies with strong names.
- Implemented AntiForgeryToken for CSRF. The Care Wall system contains three main components.

April 2010 - March 2013
Epstechno - Software Engineer
Designed software architecture and contributed to the technical design. Developed the shopping cart module using jQuery. Integrated the payment gateways—PayPal and Authorize.Net. Developed the forum module—created thread posts and replies; used web services.
