Professional Summary

Java Backend Developer with strong foundation in Core Java, OOP, JDBC, and MySQL. Hands-on experience building data-driven applications and currently learning Spring Boot to develop RESTful backend services. Strong understanding of structured programming, validation, and modular application design.

Technical Skills

Programming: Core Java, Collections Framework, Exception Handling
Backend: JDBC, Spring Boot (Basics), REST API fundamentals, MVC Architecture
Database: MySQL (CRUD operations, Joins, Stored Procedures)
Concepts: OOP, Data Structures, File Handling, Input Validation
Tools: Git, GitHub, Eclipse, VS Code, Postman
Other: HTML, CSS, JavaScript (Basics)

Projects

Student Record Management System — Java

- Designed and implemented a modular console-based system using OOP principles.
- Managed 1,000+ student records with structured file persistence.
- Implemented CRUD operations with proper input validation.
- Applied exception handling to ensure reliable data processing.

Movie Ticket Booking System — Java

- Developed a seat reservation system with booking validation logic.
- Prevented duplicate seat allocation through structured input checks.
- Designed modular booking components for maintainable code structure.
- Implemented error handling mechanisms for smooth execution.

Music Recommendation System — Python, scikit-learn

- Built a content-based recommendation engine using TF-IDF and cosine similarity.
- Processed dataset and generated personalized recommendations.
- Implemented feature extraction and similarity computation techniques.
- Structured preprocessing pipeline for improved recommendation quality.

Education

B.Tech – Computer Science and Engineering 2019 – 2023
Newton's Institute of Science and Technology, Andhra Pradesh
CGPA: 7.42

Certifications

- Java Full Stack Development – CVCORP (2023)
- Data Analytics with Python – NPTEL (2022)
