PROFESSIONAL SUMMARY

Java Backend Developer | **Spring Boot** | **Microservices** | **PostgreSQL** | Built 2 production-grade backend systems — an AI Resume Analyzer (**NLP**: **TF-IDF**, **Cosine Similarity**, **Jaccard**) and an E-Commerce **Microservices** platform (**Spring Cloud**, **Eureka**, **API Gateway**). Completed **Java** Full Stack Development training at MentorHints (Oct 2025 – Apr 2026). Seeking an entry-level backend role to contribute clean, maintainable code to impactful engineering teams.

TECHNICAL SKILLS

Languages: Java (**Java 8+**), Core **Java**, **OOP**

Frameworks: Spring Boot, **Spring MVC**, **Spring Data JPA**, **Hibernate ORM**, **Spring Cloud**

API: RESTful API Development, JSON, HTTP Methods, REST Annotations

Microservices: API Gateway, **Eureka Service Discovery**, **Feign Client**, **Circuit Breaker** Pattern

Databases: PostgreSQL, **MySQL**, **JDBC**, **DBeaver**

Testing: JUnit, **Postman** API Testing, Exception Handling

Tools & IDEs: Git, **GitHub**, **Maven**, **IntelliJ IDEA**, **Postman**, **Lombok**, **Tomcat**

Methodologies: Agile/Scrum, **MVC** Pattern, **SDLC**, Clean Code, Backend Architecture

Core Concepts: DSA, Problem Solving, **OOP** Design Principles

PROJECTS

AI-Powered Resume Analyzer 2026

github.com/Vinothkumar0509/Resume-AI-Analyzer

Stack: **Java** · **Spring Boot** · **Apache Tika** · **NLP** (**TF-IDF**, **Cosine Similarity**, **Jaccard**, **Levenshtein**) · **RESTful API** · **PostgreSQL**

- Built a **Spring Boot REST API** (POST /resume-analyzer/analyze) that accepts resume files (PDF, DOCX, TXT, RTF — up to 10MB) and raw job description text, running a 10-step ML pipeline — from **Apache Tika** text extraction through skill gap analysis to structured JSON response — delivering match results in under 5 seconds, reducing manual screening effort by ~70%.
- Engineered an **AdvancedMLMatcher** with a 4-component weighted scoring engine: Dynamic Skill Match (35%) via **Jaccard Similarity** + **Levenshtein** fuzzy matching, **Cosine Similarity** (30%) for content overlap, Experience Match (20%), and Keyword Frequency (15%) — producing composite scores mapped to a 5-tier classification system (Highly Recommended → Not Recommended).
- Implemented **TF-IDF** term weighting to extract high-signal keywords from job descriptions, combined with **Cosine Similarity** for semantic proximity and **Jaccard Similarity** for keyword overlap — each algorithm contributing distinct signal to the final composite score validated against real job descriptions.
- Designed a fully modular service-layer architecture (Controller → Service → Util) with global exception handling returning structured error responses across all endpoints, strict MIME-type file validation, and **SLF4J** logging at every pipeline step — ensuring fault-tolerant, independently testable components.

E-Commerce Microservices Application 2026

github.com/Vinothkumar0509/Microservices_Demo

Stack: **Java** · **Spring Boot** · **Spring Cloud** · **Eureka Service Discovery** · **API Gateway** · **OpenFeign** · **PostgreSQL**

- Built 5 independent microservices — Product, Order, Payment, **API Gateway**, and Service Registry — with isolated **PostgreSQL** databases per service.
- Implemented **Eureka Service Discovery** for dynamic registration and lookup, eliminating hardcoded URLs between services.
- Used **Spring Cloud** Gateway as a unified entry point, routing traffic via path predicates (/products/**, /orders/**, /payments/**).
- Integrated **OpenFeign** for declarative inter-service communication (Product → Order → Payment) with @**Transactional** order-payment flow.
- Leveraged **Spring Data JPA**, **Hibernate ORM**, **Lombok**, and **ModelMapper** for clean, layered backend architecture.

EXPERIENCE

Backend Training & Projects — MentorHints

Oct 2025 – Apr 2026

- Built 2 production-style backend projects applying **Spring Boot**, **PostgreSQL**, **Microservices** architecture, and **NLP**-based scoring engine.
- Strengthened backend skills including clean code practices, **OOP**, exception handling, and layered architecture design.
- Completed structured training covering **Java 8+**, **REST API** design, **Agile** methodology, and deployment concepts.

EDUCATION

B.E. – Computer and Communication Engineering 2020 – 2024

Panimalar Engineering College, Chennai · CGPA: 8.57 / 10.0

HSC – Class 12 2019 – 2020

SDA Matric Hr. Sec. School, Kalpakkam · 71%

SSLC – Class 10 2017 – 2018

SDA Matric Hr. Sec. School, Kalpakkam · 83.4%

CERTIFICATIONS

- Java Full Stack Development – Simplilearn
- Cloud Computing Fundamentals – TCS iON
- Web Design Internship – AICL
